

Continuation Tracker — Completion Updates

Step by step, in the order to do them, to take the continuation tracker from draft to live using the backend payment links Chris posted on Sept 11, 2026. Prepared by John Carlo Caintic, Sept 23, 2026.

Where it stands

Piece	State
Pipeline Continuation Programs, 6 stages	Built
The 11 tags: graduated, outreach sent, continuation-engaged, declined-all, and the 7 enrolled tags	All present
7 Enroll trigger links	Exist, every one points at a placeholder
WF-CT1, WF-CT2, WF-CT3, WF-CT4	Built, in draft
WF-K2b, WF-K2d, WF-K2f outreach emails	In draft, need the five offers and the buttons

Six parts below. Parts 1, 2 and 5 are the work. Parts 3 and 4 are a check and a decision. Part 6 proves it. About two hours end to end.

Part 1 — Point the seven trigger links at the real checkouts (20 min)

Why this part has to be done, and done first

A trigger link is a tracked address that GHL owns. When a client clicks it, GHL records the click on that client's record and then forwards them to the real page. The Enroll buttons in the continuation emails are trigger links for exactly that reason: the click is the signal that a graduate looked at an offer.

- 1 The click is what starts WF-CT2.** WF-CT2 Continuation Engagement listens for clicks on the seven Enroll links. A click adds the tag **continuation-engaged** and moves the client's card to Call Booked / Reply Received. Without the trigger links, GHL never knows the client was interested.
- 2 The 5-day follow-up depends on it.** Five days after the outreach email, the workflow checks for **continuation-engaged**. If the click was never recorded, an interested client is filed as no response and Luann gets a follow-up task she does not need.
- 3 The links exist but go nowhere.** All seven were created during the build with placeholders such as **Enroll-RFB-6mo.com** because the checkout pages were not confirmed yet. Today a click would record an engagement and then land the client on a dead address.
- 4 Seven links, not five,** even though RFB and Forge share a checkout. Keeping RFB and Forge as separate names means a click tells you which gender's email the client opened, which is the only attribution the emails have.
- 5 Standard link, not installments.** The Standard page carries pay in full, split pay, PayPal and buy now pay later on one screen. The installments page is a separate ThriveCart product for ThrivePay plans only. One button, one page, fewest decisions for the client.

```
Client clicks an Enroll button in the email
|
v
link.fgfunnels.com/...  <- the trigger link. GHJ records the click,
|                        adds continuation-engaged, moves the card    (WF-CT2)
v
sophieorozco.thrivecart.com/...  <- the checkout. The client pays here.
```

Use the **Standard** link for the button. The installments link is listed under each one only for the case where Chris wants it as a second button.

Standard link, use this for the button:
<https://sophieorozco.thrivecart.com/rfb-forge-6-months-standard-link/>
 ThriveCart installments link, only if a second button is wanted:
<https://sophieorozco.thrivecart.com/rfb-forge-6months-installments/>

Standard link, use this for the button:
<https://sophieorozco.thrivecart.com/rfb-forge-1year-standardlink/>
 ThriveCart installments link, only if a second button is wanted:
<https://sophieorozco.thrivecart.com/rfb-forge-1-year-installments/>

ENROLL-ContinueRMM-6mo (RMM Continuation, 6 months, no coaching) \$2,000

Standard link, use this for the button:

<https://sophieorozco.thrivecart.com/2000-rmm-continuation-standard-link/>

ThriveCart installments link, only if a second button is wanted:

<https://sophieorozco.thrivecart.com/2000-rmm-continuation-installments/>

Set up, one link at a time

- 1 In the left menu click **Marketing**. Along the top of the Marketing page click the **Trigger Links** tab. A table lists every trigger link in the account by name, with its current destination in the Link URL column.
- 2 Find the row named **Enroll-RFB-6mo**. On the right of that row click the **pencil** icon. An edit panel opens with two fields: **Name** and **Link URL**.
- 3 Do not touch **Name**. The WF-CT2 trigger and the email buttons find the link by this name, so it must stay exactly as it is.
- 4 Click into **Link URL**. Select everything in it and delete it. The placeholder **Enroll-RFB-6mo.com** must be gone completely.
- 5 Paste the Standard link for that program from the block above. For **Enroll-RFB-6mo** that is **<https://sophieorozco.thrivecart.com/rfb-forge-6-months-standard-link/>**. Paste it, do not type it. Check there is no space at either end and that it starts with https.
- 6 Click **Save**. The row now shows the ThriveCart address in the Link URL column.
- 7 Test that one link before doing the rest. On the same row click the **copy** icon to copy the trigger link's own address, the one on link.fgfunnels.com. Open a private browser window, paste it, press Enter. It must land on the ThriveCart page showing \$4,997. If it lands anywhere else, the pasted address is wrong: reopen the row and paste again.
- 8 Repeat steps 2 to 7 for the remaining six rows, working down the checklist below.

Trigger link name	Paste the Standard link ending in	Page should show
Enroll-RFB-6mo	rfb-forge-6-months-standard-link/	\$4,997
Enroll-Forge-6mo	rfb-forge-6-months-standard-link/	\$4,997
Enroll-RFB-1yr	rfb-forge-1year-standardlink/	\$8,500
Enroll-Forge-1yr	rfb-forge-1year-standardlink/	\$8,500
Enroll-RMMPlus	rmm-continuation-plus-coaching-2997-standard-link/	\$2,997
Enroll-ContinueRMM-6mo	2000-rmm-continuation-standard-link/	\$2,000
Enroll-ContinueRMM-3mo	1500-rmm-continuation-3-months-standard-link/ once Chris confirms	\$1,500

Check before moving on: all seven rows in the Trigger Links table show a sophieorozco.thrivecart.com address, none still ends in .com alone, and each tested link lands on the ThriveCart page with the price in the checklist. Do not start Part 2 until this is true, because the email buttons in Part 2 point at these same seven links.

Two things to confirm with Chris before pasting the last one. In his doc the two labels on the 3-month links are reversed: the "installments" label sits on the slug that ends in standard-link. The checklist goes by the slug. And whether the ThrivePay installments page should be a second button. If yes, add seven more trigger links named the same with an **-Installments** suffix, pointing at the installments addresses in the blocks above, and add all seven to the click trigger in WF-CT2 in Part 5.

Part 2 — The outreach emails in WF-K2b, WF-K2d and WF-K2f (60 min)

These three workflows send the what-comes-next email at different points in the program. Each one gets the same rebuild: split by gender, send the matching email with five buttons, then the four tracking steps. Build it fully in **WF-K2b Week 5 Next Steps** first, then repeat in WF-K2d and WF-K2f.

2.1 Split the workflow by gender

Branch on the program tag rather than Offer Discussed. The tag is on every client record and always carries the gender. Offer Discussed is often blank on the contact.

- 1 Automation, open **WF-K2b Week 5 Next Steps**. Find the existing email step, the what-comes-next email.
- 2 Click the plus **above** that email step and add an **If/Else**. Name it **Women or men**.
- 3 First branch, name it **Women**. Add one condition: Contact Details, Tags, Includes, **client - rmm accelerator women**.
- 4 Click **Add Segment** and add the next tag as its own segment. Repeat until all eight tags in the box below are each in their own segment, joined by OR.
- 5 Check the connector between every segment reads **OR**. One box holding several tags means all must match and the branch never fires.
- 6 Leave the **None** branch as the men's path. Every client who is not a woman falls through to it.
- 7 Drag the existing email step under the **Women** branch. Then click the plus under **None** and add a second **Send Email** for men.
- 8 Click **Save Action**.

The eight women's tags for the Women branch, one segment each

```
client - rmm accelerator women
client - accelerator women
client - group only women
client - rmm self paced women
client - couples coaching women
client - vip sophie women
client - course only women
client - rmm women
```

2.2 The two emails and their five buttons

The women's email is **Let's Keep Going Together**. The men's email is **Step Into Your Power**. Add the five-option block below to each. Every button must be a trigger link, never a pasted address, or a click will not reach WF-CT2.

Women's email, five options in this order

1. Radiant Feminine Blueprint, 6 months	\$4,997	button -> Enroll-RFB-6mo
2. Radiant Feminine Blueprint, 1 year	\$8,500	button -> Enroll-RFB-1yr
3. RMM Plus Coaching, 6 months	\$2,997	button -> Enroll-RMMPlus
4. Continue with RMM, 6 months	\$2,000	button -> Enroll-ContinueRMM-6mo
5. Continue with RMM, Short Term, 3 months	\$1,500	button -> Enroll-ContinueRMM-3mo

Men's email, five options in this order

1. Forge, 6 months	\$4,997	button -> Enroll-Forge-6mo
2. Forge, 1 year	\$8,500	button -> Enroll-Forge-1yr
3. RMM Plus Coaching, 6 months	\$2,997	button -> Enroll-RMMPlus
4. Continue with RMM, 6 months	\$2,000	button -> Enroll-ContinueRMM-6mo
5. Continue with RMM, Short Term, 3 months	\$1,500	button -> Enroll-ContinueRMM-3mo

How to attach a trigger link to a button, five times per email

- 1 Open the email step, then **Edit** the email body.
- 2 Select the button or the text that should be clickable, for example the line for option 1.
- 3 Click the link icon. In the link type dropdown choose **Trigger Link**, not URL.
- 4 Pick the link named in the block above for that option, for example **Enroll-RFB-6mo** for the women's option 1.
- 5 Apply, then repeat for options 2 to 5. Save the email.

Check before moving on: hover each of the five buttons in the preview. Each should show a link.fgfunnels.com address with the trigger link's slug, not a thrivecart.com address. A thrivecart.com address means the raw URL was pasted and that click will not be tracked.

2.3 The four tracking steps after each email

Add these under **both** emails, the women's and the men's, in this order.

- 1 **Add Contact Tag:** **outreach sent**. Save Action.
- 2 **Create/Update Opportunity:** pipeline **Continuation Programs**, stage **Outreach Sent**, opportunity name **{{contact.name}}**, status Open. Save Action.
- 3 **Wait:** type **Time Delay**, 5, unit **Days**. Not Event / Appointment Time, which skips when there is no appointment. Save Action.
- 4 **If/Else**, name it **Responded or enrolled**. One branch named **Yes** with eight OR segments, one tag each, listed in the box below. Leave the Yes branch empty so it ends.
- 5 Under the **None** branch: **Create/Update Opportunity**, pipeline **Continuation Programs**, stage **Needs Follow-Up**. Save Action.
- 6 Still under None: **Add Task**. Title **Continuation follow-up: {{contact.name}}**. Description **No response 5 days after the continuation email**. Assign to **Luann Hirou**. Due in 3 days. Save Action.
- 7 Click **Save** in the top right. Leave the workflow in **Draft**. Part 5 publishes it.

The eight tags for the Yes branch of Responded or enrolled, one segment each

enrolled-rfb-6mo
enrolled-rfb-1yr
enrolled-forge-6mo
enrolled-forge-1yr
enrolled-rmmplus
enrolled-continuermm-6mo
enrolled-continuermm-3mo
continuation-engaged

The original build guide assigned that task to Krissy. The client journey now runs to Luann, so every task in these three workflows goes to her.

2.4 Repeat in the other two

- 1 Open **WF-K2d Week 9 Next Steps** and build 2.1 to 2.3 the same way. Save, leave in Draft.
- 2 Open **WF-K2f Week 4 Next Steps** and do the same. Save, leave in Draft.

Check before moving on: each of the three workflows shows: If/Else, two email branches, and under each email the tag, the opportunity update, the 5-day wait, and the responded If/Else with the task under None. Thirty buttons in total across the six emails, each one a trigger link.

Part 3 — Confirm WF-CT3 values, nothing to change (5 min)

- 1 Open **WF-CT3 Continuation Enrolled**.
- 2 Check the seven Contact Tag triggers, one per enrolled tag.
- 3 Click the If/Else and open each of the seven branches. The opportunity value in each must match this table.

Branch tag	Opportunity value
enrolled-rfb-6mo	4997
enrolled-rfb-1yr	8500
enrolled-forge-6mo	4997
enrolled-forge-1yr	8500
enrolled-rmmplus	2997
enrolled-continuermm-6mo	2000
enrolled-continuermm-3mo	1500

Check before moving on: all seven match. They already match Chris's confirmed pricing, so this should be a look, not an edit. Close without changes.

Part 4 — Decide who applies the enrolled tag (a decision, not a build)

RFB and Forge share one checkout, so a ThriveCart purchase cannot tell the two apart on its own. Until that is automated, one person applies the enrolled tag when a payment is confirmed. WF-CT3 does everything after that: stage, value, done.

Client bought	Tag to add on the contact
Radiant Feminine Blueprint, 6 months	enrolled-rfb-6mo
Radiant Feminine Blueprint, 1 year	enrolled-rfb-1yr
Forge, 6 months	enrolled-forge-6mo
Forge, 1 year	enrolled-forge-1yr
RMM Plus Coaching	enrolled-rmmplus
Continue with RMM, 6 months	enrolled-continuermm-6mo
Continue with RMM, 3 months	enrolled-continuermm-3mo

- 1 Agree with Chris who owns this, Luann or Krissy.
- 2 That person, on each confirmed payment: open the client's contact, click the plus next to Tags, pick the one tag from the table, done. Nothing else to touch.
- 3 Add the table above to their close checklist.

Part 5 — Publish, in this order (15 min)

- 1 Part 1 must be complete. Confirm the seven trigger links carry thrivecart.com addresses.
- 2 If Chris wanted the installments buttons, open **WF-CT2 Continuation Engagement**, click the Trigger Link Clicked trigger, and add the seven **-Installments** links to its selection. Otherwise skip this step.
- 3 Open **WF-CT1 Graduation Entry**. Settings tab: Allow Re-Entry OFF, Allow Multiple Opportunities OFF. Builder tab: switch the toggle to **Publish**.
- 4 Open **WF-CT2 Continuation Engagement**. Settings: Allow Re-Entry ON, Allow Multiple Opportunities OFF. Publish.
- 5 Open **WF-CT3 Continuation Enrolled**. Settings: both OFF. Publish.
- 6 Open **WF-CT4 Continuation Declined**. Settings: both OFF. Publish.
- 7 Only after Part 2 is finished in all three: publish **WF-K2b**, **WF-K2d** and **WF-K2f**.

Check before moving on: in the Automation list, the four WF-CT workflows and the three WF-K2 outreach workflows all show Published. WF-CT1's date trigger only fires on the exact day, so publishing does not sweep existing clients in.

Day counts. WF-CT1 fires at program start date plus 77 days and WF-CT4 at plus 90. Both assume a 12-week container. Confirm with Luann whether any program runs longer, and adjust those two numbers before publishing if so.

Part 6 — Prove it before the first real graduate (30 min)

Use a test contact with an email you control. Shorten WF-CT1 to 1 day for the test if you do not want to wait, and set it back to 77 afterwards.

- 1 Give the test contact the tags **existing client** and **client - rmm accelerator women**, and set `program_start_date` to 77 days ago.
- 2 Wait for WF-CT1. Check: the contact has **graduated** and a card sits at **Graduated** in Continuation Programs.
- 3 Add the test contact to **WF-K2b** by hand from Actions, Add to Workflow. Check: the women's email arrives with five buttons, **outreach sent** lands, the card moves to **Outreach Sent**.
- 4 From the test inbox click the option 3 button. Check: the ThriveCart page for \$2,997 opens, **continuation-engaged** is added, the card moves to **Call Booked / Reply Received**.
- 5 Add the tag **enrolled-rmmplus**. Check: the card moves to **Enrolled** with value 2997.
- 6 Remove **enrolled-rmmplus** and **continuation-engaged**, shorten the 5-day wait to 5 minutes, add the contact to WF-K2b again. Check: card moves to **Needs Follow-Up** and a task for Luann appears. Set the wait back to 5 days.
- 7 Clean up: remove the test contact from every workflow, clear its tags, delete its card in Continuation Programs.

Check before moving on: all six checks passed. The tracker is live and the first real graduate will flow through without anyone touching it.
